<u>Q1:</u>

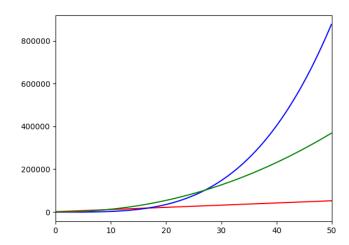

As n starts off and is small, f1 has the greatest value, followed by f3 and finally f2.

As n continues to increase, f3 overtakes f1 in value, while f2 is the least but showing exponential growth

As n is very large, f2 has the largest value, and f3 has the second highest, while f1 is the least. f3 and f1 have lower rates of growth than f2.

# plt.plot(t, t, 'r--', t, t**3.5 - 2**10, 'bs', t, 100*t**2.1 + 50, 'g^')
for item in msize:
    t = np.arange(0, item, 0.1)
    plt.plot(t, (2**10)*t + (2**10) , 'red', t, t**3.5 - 1000, 'blue', t,
100*t**2.1 + 50, 'green')
    plt.xlim(0, item)
    plt.rcParams["figure.figsize"] = (7,7)
    plt.show()
